

Restaurant System - Day 1 Overview

Project Overview

This project is a full-stack restaurant management system with customer ordering, table booking, payment integration (Paystack), rider delivery tracking, and admin management dashboard.

Day 1 Achievements

- Set up Node.js backend server with Express
- Integrated Firebase Authentication and Firestore setup
- Created multi-role authentication (Admin, Rider, Customer)
- Built frontend structure (Home, Menu, Booking, Contact pages)
- Implemented login and registration system
- Added Google authentication support
- Created role-based redirection to dashboards
- Built Admin and Rider dashboard UI foundations
- Implemented dark mode toggle, hamburger menu, and animations
- Fixed multiple backend and module loading issues

System Architecture

Frontend: HTML, CSS, JavaScript (multi-page responsive UI). Backend: Node.js + Express.

Database: Firebase Firestore. Authentication: Firebase Auth. Payments: Paystack (setup pending).

Key Issues Resolved

- Fixed module loading errors in Node.js
- Corrected Firebase Admin configuration
- Resolved incorrect file paths and server crashes
- Fixed routing and static file serving issues
- Fixed Google authentication domain errors
- Stabilized backend server execution

Next Phase (Day 2)

Cart system development, order creation and storage in Firebase, Paystack payment integration, order tracking, rider assignment system, and admin order management dashboard.
